March 2016 Dealer Announcement

HO SCALE TIER 4 GEVO!

Photo Credit: W. Kirk Orndorff

The evolution (pun intended) of the GEVO's since 2005 has brought us to the Tier 4, an important motive power development in our effort to "save the planet" by limiting harmful emissions. Named after the EPA Tier 4 emission standards requirement, these impressive locomotives operate more efficiently than any coming before them. As the GEVO's have evolved over the past eleven or twelve years, InterMountain has met the challenge of upgrading the tooling to accurately depict the newest models in HO scale. This effort continues as all new tooling will be provided to accurately model the current changes. While only four railroads currently own these locomotives, limiting the choice of paint schemes, it is anticipated that their use will become widespread in the years to come.

N SCALE TRINITY 3281 Cu. Ft. COVERED HOPPERS

This release includes TEN new paint schemes for this modern day prototype. This highly detailed model accurately represents thousands of these cars in current use across the continent. Carrying a wide variety of products these cars are used individually in consists or as unit trains over a wide geographical area. Every modern day N scale modeler will want dozens of these cars to accurately portray this important part of what we see on the rails today.

INTRODUCING "TECH TIPS"

Below you will find a tip that will help many of you in using InterMountain models. We hope to offer other tips and tricks in the months to come in order to enhance your modeling experience. The tips will be first presented in our monthly newsletter, then added to our website.

What to do when your decoder equipped Choo-Choo won't Choo-Choo:

The first thing to do if something isn't working correctly is to reset the decoder by setting CV 8 to 8 using your DCC system. This works for both sound and non-sound factory equipped units with ESU and SoundTraxx decoders. **Resetting the decoder solves 95% of all decoder issues.** This can be done on either the program track or on the main track. If you're not sure how to program CVs, consult your DCC system manual for instructions. If you have a programming option always choose Direct (DIR) mode programming.

If CV 8 to 8 doesn't solve your issue or if you are trying to change a different setting we have both ESU and SoundTraxx decoder Tips and Tricks pages located on our website under the Customer Service button and the DCC Assistance Link.

As always if you cannot resolve your issue with either of the above feel free to give us a call at 1-800-472-2530 or send an e-mail to intermountain@intermountain-railway.com.

HO SCALE X29 BOXCARS

This month sees the return of a classic staple of the steam and transition era, the X29 boxcar. Originally designed by the Pennsylvania Railroad in the early 1920's, almost 30,000 were built by 1934. Other railroads adapted the design to suit their needs resulting in a versatile car that saw widespread use across the country well into the 1960's. The InterMountain car will feature prototype specific details including doors, ends, brakes and body variations. One new road name joins eight previously released paint schemes in addition to undecorated kits for each of the different body variations.

HO SCALE HYUNDAI 53ft. HI-CUBE CONTAINERS

Three new paint schemes are available for reservation for the first time on this unique transportation model. These containers are seen across the country as they carry all types of goods between manufacturers, distribution centers and end users. Modern day modelers need a large selection of container sizes and types to accurately model this important part of today's railroad activity.

HO Scale GE EVOLUTION SERIES
TIER 4 LOCOMOTIVES

Announced: March 11 Reservations Due By: April 30 Available: Oct / Nov

"GE Transportation's Evolution Series Tier 4 Locomotive meets the U.S. Environmental Protection Agency's (EPA) stringent Tier 4 emission standards without use of any type of after-treatment. Part of the ecomagination-certified Evolution Series, this locomotive will decrease emissions by more than 70 percent and will save railroad customers more than \$1.5 billion in urea infrastructure and operational costs. GE Transportation has invested \$600 million in the Evolution Series since its introduction in 2005." - General Electric

List:
\$199.95
\$299.95 w/ Sound

The InterMountain Tier 4 GEVO will continue our tradition of excellence in this series of modern, GE-built locomotives. This all new model will feature finely molded parts and railroad specific details, accurate paint and lettering with laser sharp printing and a smooth, powerful drive mechanism. This locomotive will be factory equipped with ESU® sound decoders or ESU® non-sound decoders; a DC plug option will be available upon request. We are offering this locomotive decorated for the first four railroads to order and operate this new design. As more railroads purchase these and take delivery, we will make subsequent product announcements.
